

### Investment Approach

The Real Return Bond Fund seeks to provide long-term capital appreciation through investment in real return bonds (RRBs). The Fund invests primarily in RRBs that are issued or guaranteed by the federal or provincial governments of Canada and pay interest based on a real interest rate. Unlike standard fixed coupon bonds, payments from RRBs are adjusted for changes in the Canadian Consumer Price Index.

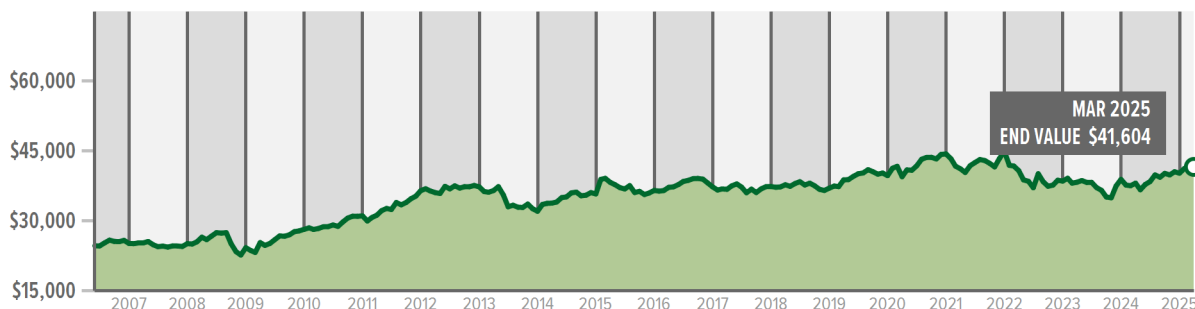

#### Risk rating

This rating is based on how much the fund's returns have changed from year to year. It doesn't tell you how volatile the fund will be in the future. The rating can change over time. A fund with a low risk rating can still lose money.

For more information about the risk rating and specific risks that can affect the fund's returns, see the "What is a Mutual Fund and What Are the Risks of Investing in a Mutual Fund?" section of the fund's simplified prospectus.

### Growth of \$25,000 Since Inception<sup>1</sup>

The rate of return or mathematical table shown is used only to illustrate the effects of the compound growth rate and is not intended to reflect future values or returns on investment in the investment fund or asset allocation service.

### Performance

#### Fund Characteristics

Number of holdings	13
Current Yield	1.4%
Duration (in yrs)	12.3
Average Rating	Aaa
Standard Deviation (3 yr)	10.3%

Current yield is a bond's annual coupon interest divided by the bond's current market price. Calculated at the portfolio level, this metric uses notional subtotaling where each security's weight is represented as the security's notional market value divided by the portfolio's total market value.

Average Rating is the weighted average of the Moody's rating of each security in the portfolio, rolled up to the portfolio level.

Standard Deviation of performance is a measure of historical volatility risk.
