

Investment Approach

The Long Duration Bond Fund seeks to achieve a return consistent with holding longer term debt instruments. The Fund invests primarily in bonds issued or guaranteed by the federal, provincial and municipal governments of Canada and by Canadian corporations or other issuers. In addition, the Fund may invest in strip bonds (principal and/or interest), residual bond payments, and interest packages issued or guaranteed by the federal and provincial governments of Canada.

Risk rating

This rating is based on how much the fund's returns have changed from year to year. It doesn't tell you how volatile the fund will be in the future. The rating can change over time. A fund with a low risk rating can still lose money.

For more information about the risk rating and specific risks that can affect the fund's returns, see the "What is a Mutual Fund and What Are the Risks of Investing in a Mutual Fund?" section of the fund's simplified prospectus.

Current yield is a bond's annual coupon interest divided by the bond's current market price. Calculated at the portfolio level, this metric uses notional subtotaling where each security's weight is represented as the security's notional market value divided by the portfolio's total market value.

Average Rating is the weighted average of the Moody's rating of each security in the portfolio, rolled up to the portfolio level.

Standard Deviation of performance is a measure of historical volatility risk.
