Investment Approach

The U.S. Large Company Equity Fund seeks to provide capital appreciation over the long term through broad participation in the large cap portion of the U.S. equity market. The Fund holds equity securities primarily of large U.S. companies with market capitalization of more than U.S. \$1 billion. All holdings are listed on recognized stock exchanges. The Fund utilizes a manager-of-managers investment strategy that combines multiple specialist Portfolio Managers.

Class O(H) units will have a return that is based on the performance of the Fund's portfolio investments because the foreign currency exposure of this portion of the Fund is hedged using derivative instruments such as foreign currency forward or futures contracts.

Risk rating

This rating is based on how much the fund's returns have changed from year to year. It doesn't tell you how volatile the fund will be in the future. The rating can change over time. A fund with a low risk rating can still lose money.

For more information about the risk rating and specific risks that can affect the fund's returns, see the "What is a Mutual Fund and What Are the Risks of Investing in a Mutual Fund?" section of the fund's simplified prospectus.

Standard Deviation of performance is a measure of historical volatility risk.

Weighted Capitalization is the weighted average market capitalization of each security in the portfolio, rolled up to the portfolio level.

Dividend yield is a stock's annual dividend divided by the stock's current share price. Calculated at the portfolio level, this metric uses notional subtotaling where each security's weight is represented as the security's notional market value divided by the portfolio's total market value.

Historical Price-to-Earnings Ratio is the recent price of a security divided by the company's annual fiscal year earnings per share. Preliminary earnings per share values are used when available otherwise the earnings per share is from the most recent fully reported financials.

Sharpe Ratio is a measure of risk-adjusted return. It is the difference between the return on an investment and a risk-free interest rate, divided by the investment's volatility as measured by Standard Deviation.
